## SPEC SHEET

### SECTOR:

Residential

### OUR CLIENT & ARCHITECT:

NG Architecture

### CONTRACTOR:

Seacon

### OTL PRODUCTS SPECIFIED:

9 bespoke OTL Linear wet room floor systems

## PROJECT OVERVIEW

Nick Gowing from NG architecture used On The Level alongside Seacon, the main contractor on the project, to supply 9 wet rooms for this complete renovation of a beautiful, large residential home in Wimbledon.

Each wet room included an On The Level custom-made linear shower former. One of the linear formers incorporated 2 separate linear channels which were

integrated together into one large, bespoke, specially designed, unique shower former. Sizes ranged from 900mm x 900mm to an unusual, completely bespoke shape for the master bathroom on the top floor of this stunning city home.

Finished to an exceptionally high standard by Seacon, the flooring which covers the former is 30mm cast concrete, offering a truly simple, classy and stylish floor finish. The wall cladding used a solid surface (Corian) with a seamless finish, with no grout lines, blended and polished out. Glass panels were all bespoke-manufactured using 10mm toughened safety glass.
